Study Hours Vs Final Score

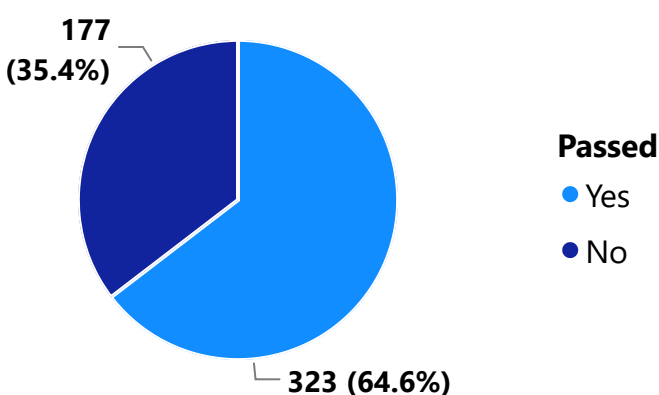

Avg Final Score by Parent Education

Attendance Rate Vs Final Score

Passed/Failed Distribution

Key Findings

- Study hours is the clearest gap between pass and fail.** Students who passed studied 19.5 hours/week on average, versus just 7.7 hours/week for those who failed — nearly a 12-hour gap.
- Attendance also splits pass/fail, but less sharply.** Passing students averaged 77.9% attendance versus 73.5% for those who failed — a real gap, but much smaller than the study-hours one.
- 64.6% of students passed** (323 of 500), leaving 177 who did not — worth noting as your baseline pass rate.
- Gender makes almost no difference.** Male and female students scored within 1 point of each other on average (56.5 vs 55.5).
- Age has little effect on final score**, with all ages (15–19) averaging within 3 points of each other.
